

# Density Ino

Adjusts the density of a semi-transparent image.  
It allows to emphasize streamlined touch effects.  
The Alpha channel requires semi-transparent values.

--- Inputs ---

Source

Connect the image to be processed.

Reference

Connect the reference image to assign the strength of the effect into each pixel.

--- Settings ---

Density

Specifies the density.

The density will change with the semi-transparent pixels of the image.

Specify a value greater than or equal to 0. The maximum is 10.

A value greater than 1, will make the image more opaque.

While at 1 it will not change the original density of the image.

When values are greater than 0 and smaller than 1, the image will be semi-transparent.

If the value is 0, the image will disappear.

The default value is 1.

Reference

Choose how the Reference image values are used to set the strength of the effect into each pixel.

Choose from Red/Green/Blue/Alpha/Luminance.

Choose Nothing to disable the effect.

The default value is Red.
